

My past work experience and accomplishments includes...

A long history of leadership and experience in design development, problem solving, architectural planning and design services which have helped in the creation all types of custom residential and non-residential projects. Past work includes:

- Over 200 single family residential projects incorporating elements of passive solar, natural and artificial lighting, landscape design and energy efficiency into the design.
- Non-residential work has included hotels, motels, retail shops, restaurants and office space including mixed use retail/office buildings.
- Landplaning
- Project Manager for the creation of the Water place Housing “Water Place”, and Employee Housing Project for the City of Aspen. The project provided twenty-two (22) new energy efficient single family homes for City employees around a common open space. It was completed on time and within the budget and was the first certified “green” multi-family project on the Western Slope. All the homes in this project received a five star rating by "Energy Rated Homes of Colorado" and in 2004 an A.I.A Merit Award for Design Excellence.
- Interior space planning and lighting design for office space.
- Construction observation, contract administration.
- Arbitrator of disputes arising between the Homeowner and the Builder.
- Expert witness regarding claims the inadequacy of construction documents, defective construction and poor workmanship.
- Project Architect for the Washington State University Communications Infrastructure Renewal Project which began in the late fall of 1991 and was completed in 1995. The work involved the modifications to 324 existing buildings throughout the campus to allow for the installation of a campus wide fiber optic computer cable network. The completed project provided the entire university campus with a common utility for the transmission of data, video and voice signals on an integrated campus wide network. WSU is one of the first universities to build its own campus-wide computer network.

- Project Architect in 1985 of the Design/Build Team chosen by the City of Glenwood Springs, Colorado to build a 530-foot long, five-span bridge Pedestrian/Bicycle Bridge. The bridge design by Bob Pattillo, P.E features a parabolic arch over the river over the Colorado River and connects pedestrians between the hotels and motels on the north side of the Colorado River to the downtown shops and restaurants on the South side.
- Project Architect for the restoration of the 150,000 sf, historic Hotel Colorado. The restoration work in 1983 included repairing various structural components, all new energy efficient windows, and the restoration of the exterior balconies, the dining room skylight and the main lobby, piazza and main entrance. The completed work restored the Hotel built in 1893 to its former dignity and grandeur. Today it is still the most majestic building in Glenwood Springs and listed as a National Historic Landmark.

A complete list of all the work experience of is available upon request.
